## DATA SHEET

## Zirconia O<sub>2</sub> Sensors

## OXY-Flex Oxygen Analyser

- High accuracy linear output
- Externally triggered automatic or manual calibration
- Can be calibrated in fresh air (20.7% O<sub>2</sub>) or to any other known O2 concentration
- Selectable output filtering allows adaptive, fast and dynamic or slow and stable output

#### Supply Voltage

**Gas Temp** 

+250°C

EMPERATURE

#### **Digital Output**

### **Analogue Output**

#### Response Time

- Cycling 3.3V<sub>DC</sub> logic output allows direct monitoring of the O<sub>2</sub> sensor pump cycle for diagnostic purposes
- No reference gas required

#### **TECHNICAL SPECIFICATIONS**

Supply voltage  $24V_{DC} \pm 10\%$ 

Supply current 500mA max. at  $24V_{DC}$ 

Digital output RS232

Analogue output 4—20mA; load  $600\Omega$  max. 0— $10V_{DC}$ ; load  $10k\Omega$  min.

or Housing temperature limits

-10°C to +85°C Storage:

Operating: -10°C to +85°C

Permissible gas temperatures (probe tip)

Standard: -100°C to +250°C High: -100°C to +400°C

Gas flow rate 0 to 10 m/s

Permissible acceleration

Repetitive 5g Incidental 30g **OUTPUT VALUES** 

Oxygen range (analogue output)<sup>2</sup>

 $0.1^{1}$ —25%  $O_{2}$  $0.1^{1}$ —100%  $O_{2}$ 

Oxygen range (RS232 output) 0.11 and 100% O<sub>2</sub>

Accuracy after calibration3, 4 1% O<sub>2</sub> Repeatability after calibration<sup>3</sup> 0.5% O<sub>2</sub>

Output resolution

Analogue 4—20mA 0.01mA Analogue 0—10V<sub>DC</sub> 0.01V Digital RS232 0.01% O<sub>2</sub> < 15s Response time

Warm up time (prior to sensor operation) 60s Output stabilisation time

~ 180s

- Prolonged operation below 0.1% O<sub>2</sub> can damage the sensing element.
- Range selectable by altering the position of the jumper links on the PCB; refer to PCB Layout on page 3.
- Assuming barometric pressure (BP) remains constant.
- As the O<sub>2</sub> sensor measures the partial pressure of oxygen (PPO<sub>2</sub>) within the measurement gas deviations in the BP from that present during calibration will cause readout errors proportional to the change. EG. if the sensor reads 21%  $O_2$  at 1013.25mbar and the BP increases by 1%, the sensor readout will also increase by 1% to 21.21%  $O_2$ .

Housing: Amphenol Ecomate C016 30C006 100 12

Mating Connector: Binder 99-4218-00-07 NOTE: Mating connector also supplied.

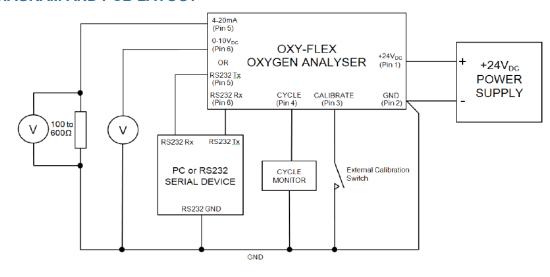

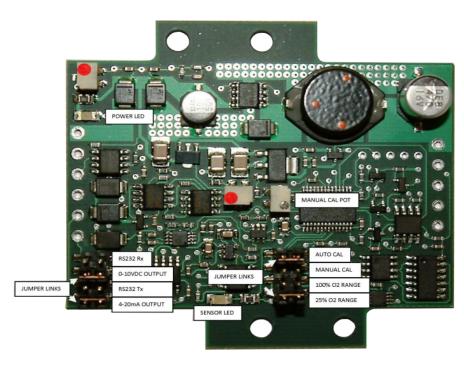

Pin	Assignment
1	24V <sub>DC</sub> ±10%
2	GND
3	Calibrate
4	Cycle
5	4—20mA / RS232 Tx (see Note)
6	0—10V <sub>DC</sub> / RS232 Rx (see Note)
CENTRE	Housing / Probe Earth

NOTE: Output pins 5 and 6 are both referenced to the supply GND (pin 2). Due to high current flow in the supply GND, when monitoring the 0—10V<sub>DC</sub> output (pin 6) it is recommended that a separate GND wire for the measurement system is taken from pin 2. This removes errors due to voltage drops in the power supply connections.

Assignment of output pins 5 and 6 selectable by altering the position of the jumper links on the PCB; see PCB LAYOUT below.

# ORDER INFORMATION

Generate your specific part number using the convention shown below. Use only those letters and numbers that correspond to the options you require — omit those you do not. Include the "OXY-FLEX" prefix.

Do not exceed maximum ratings and ensure sensor(s) are operated in accordance with their requirements.

Carefully follow all wiring instructions. Incorrect wiring can cause permanent damage to the device.

Zirconium dioxide sensors are damaged by the presence of silicone. Vapours (organic silicone compounds) from RTV rubbers and sealants are known to poison oxygen sensors and MUST be avoided. Do NOT use chemical cleaning agents.

Failure to comply with these instructions may result in product damage.

### 1 INFORMATION

As customer applications are outside of Apollosense Ltd.'s control, the information provided is given without legal responsibility. Customers should test under their own conditions to ensure that the equipment is suitable for their intended application.

For detailed information on the sensor operation refer to application note AN0043 Operating Principle and Construction of Zirconium Dioxide Oxygen Sensors.

**General Note:** Apollosense Ltd. reserves the right to make changes to product specifications without notice or liability. All information is subject to Apollosense Ltd.'s own data and considered accurate at time of going to print.
